

## OVERVIEW

Sharyn is an Architect whose background focus has been on detailed modelling and analysis.

She has acted in a supporting role for digital transformations of varying sizes and scopes from local South Australian born businesses through to large international utilities. Drawing on her previous background in Architecture and Engineering, she has extensive experience overlaying information sets within diagrams and documentation, determining relationships and dependencies, and providing viable solutions to suit these requirements.

Sharyn has a Bachelor of Design (Architectural Studies) and has completed the Enterprise Architecture Essentials course.

## EXPERIENCE SUMMARY

### KEY SKILLS

- Business capability model generation
- Information overlays, heat maps and analysis
- Technical documentation and design
- Interpretation and review of detailed drawings and models
- Stakeholder management
- Team leadership
- Short turn around projects
- High volume and quick turnaround business models

### QUALIFICATIONS

- Bachelor of Design (Architectural Studies)
- Certified Enterprise Architecture Essentials

- Participated in the stage one work for BG&E, handling a range of tasks contributing to the creation of a planning level business capability model, accompanying BCM descriptions and a set of heat maps and overlays to demonstrate the effective use of the BCM for gaining business insights.
- Provided support for the Babcock payroll ecosystem intent and architecture by creating a draft BCM, target state architecture diagram and mapping of outcomes to the BCM.
- Assisted in the production of an enterprise integration target state and dependency/decision point roadmap for South Australia Police. Responsibilities included gathering input from stakeholder meetings and generation of communication graphics for the roadmap deliverable.
- Participated in the digital uplift of Aboitiz Power from establishment of operating model and business intent through to delivery of the technology roadmap. Responsibilities included creation and maintenance of the BCM diagram and all associated heat maps and overlays. Provided support for tasks contributing to business intent, operating model, standardisation, business capabilities, current state solutions analysis, target state solution architecture and the solution roadmap.
- Assisted in the review of one of the core systems at Flinders Ports, creating heatmaps and overlays to assess the functionality of the system in relation to the capability model.
- Responsible for modelling, generation, and updates to artifacts for the Australian Cyber Collaboration Centre, including the business capability model, target state solutions overlay and ABCD document.
- Provided support for a technology roadmap and digital transformation at Pillico Foods Corp, handling a range of tasks contributing to business intent, capability modelling, current state analysis, target state design and roadmap. Maintained and updated the BCM and associated descriptions and created numerous heat maps and overlays. Additionally, worked on categorising issues and outcomes for business intent, generation of ABCD poster, conceptual target state architecture diagram and updates to the technology roadmap document.
- Assisted in the target state solution architecture stage of works for Haigh's Chocolates, covering tasks such as note taking in meetings, updating the business capability model, and generating relevant overlays and heat maps.
- Handled a range of projects from small residential, through to commercial and government, focusing on technical design and documentation, tender submissions, cost estimates and detailed review and analysis for QikEstimating. Developed and designed technical drawings using multiple levels of overlays of digital drawings to establish critical design points and flowthrough across the overall model. Provided custom designed solutions ensuring compliance with relevant industry standards.
- Responsible for refresh and update of floor plans for two data centre facilities within South Australia to produce emergency evacuation drawings as part of ISO certification for YourDC. Amalgamated details from previous drawings with current onsite physical layouts. Refined the CAD file artefacts to ensure a consistent style of printed documentation and overhauled digital layer setup for improved functionality.
