OVERVIEW

Colin is an experienced and seasoned architect and professional consultant with a passion for the design, development, delivery, and implementation of architecture, applications software, and related services. The solutions are driven by their necessity and focus to core business capabilities / modernisations; the key attributes of which are indispensable business and software services, digital transformation, and disruption.

The customer component is the basis of all solutions Colin has been a part of; his strategy is to ensure that his work realizes the required levels of accuracy and success and is primarily based on listening to and understanding the business need and/or problem. This allows him the vision and capability to architect and design the most effective, appropriate solution for each client, based on individual need.

With over 20 years of experience, he believes that he can view a complicated, and even sometimes a seemingly impossible, circumstance or business problem and provide a response that tailors a unique yet realistic, functional, or strategic solution that would add multilateral business value for all architecture disciplines.

EXPERIENCE SUMMARY

- Colin was a senior solution architect in the enterprise architecture team for the department of infrastructure and transport in Adelaide; engaged to provide solution and business architecture services; he was also fundamental in contributing to the EA practice with the lead architect in progressing and developing the digital twin to support their strategy to execution approach in delivering interactive product life cycle management.

- Colin was the enterprise architect hired to provide EA; solution architecture services; and management consulting for Indigenous Business Australia and the Indigenous Land Corporation. He collaborated on the ICT reform and core banking platform replacement programs. He also developed the cloud strategy and the digital transformation work packages for the program and manage the implementations.

- Colin was the lead architect and played a pivotal role in the design and delivery of a new customer portal for South Australia Water for customers to perform self service functions; a service Layer to decouple the Portal from CRM services; implement new Security Architecture that would include B2C and B2B. Colin also contributed via the delivery of this project to the establishment of a DevOps automation practise in the organisation.

- Colin was the business architect on the Australian Transport Safety Bureau's ICT Core Investigative Case Management System replacement. He was contracted to do business analysis and architecture work using a modelling technique called event storming where he modelled all the business events, created the business requirements, logical solution design and prepared all the procurement packs for release to market.

- Colin was the lead architect on the CRM, digital platform procurement and implementations project across the loans and financial service businesses for a banking institution in South Africa called DirectAxis. He developed the integration and service strategy for the business that supported the transition to their target state. He also created the strategy for digital transformation and the road map to implement this within the organisation.

- MMI Holdings Limited (MMI) is a South African based financial services group that employed Colin to design, architect and deliver the new health platform for Africa where he was responsible for all the research, analysis and design that went into gathering all the data and intellectual property for the system, based on the requirements provided by the business he architected and delivered a health claims platform across 11 countries in Africa.

- Vodacom (Vodafone Group) is a leading African telecommunications company providing a wide range of communication services, including mobile voice, messaging, data, financial and converged services to 69.3 million customers. Colin was responsible for a team that managed and delivered SME SOP migration and upgrade, Consumer SOP migration and upgrade, Vodacom Direct Technology replacement – Commissions, Vodacom Direct and SOP fraud mitigation system, SME, and Consumer. He also implemented a decision analytics scoring system with the Experian and Trans Union credit bureaus for mobile customer acquisitions.
